Clicks / eligible day

Unavailable

Non-banked submissions / week

Unavailable

Scheduled non-submissions / week

Unavailable

Presentation peers, weeks 4-7:
1,065 people / 4,207 person-weeks.

Unavailable is not zero. Eligibility is administrative; logging completeness is unknown. Grades unavailable: release times unknown (original compiler context).

Saved agent output · historically repaired · new rendering

Qwen2.5-14B · compact A
Saved selections · deterministic values

Figure 1: Adaptive presentation of saved development answers from Qwen2.5-14B compact A: (a) case s6_01, personal click-rate change and its selected recent peer comparison; (b) case s6_09, unavailable recent measurements alongside recorded-zero and administratively ineligible weeks. The original agent selected the answers; deterministic tools calculated every value. The original compiler supplied the observation timeline and grade context in (b), which was accepted after the historical single repair. Presentation v2 supplies layout, labels and emphasis, not an answer repair. The shaded band is a pointwise 95% bootstrap interval for the peer mean, not for the person or personal change. Recorded clicks do not establish effort or learning. These are new renderings of development cases, with no usability or accuracy evaluation.

Person **3.50** · peer **6.98**

Difference **-3.48**

Peer mean 95% CI [6.50, 7.58].

1,128 peers / 4,451 person-weeks.

[Evidence ↗](#)

Figure 2: A controlled reference-period change in saved compact-A case s6.05. Actual browser selection switches from recent presentation peers (a) to the same offering's peers during the earlier window (b). The focal person, recorded click rate of 3.50, focal weeks 8-11 and display scale remain fixed; reference weeks change from 8-11 to 0-3. Eligible membership differs (1,024 versus 1,128 peers). Both comparisons were agent-selected; values and 95% peer-mean bootstrap intervals were calculated by the original tools. The new presentation selects among saved records, without new investigation or statistical computation. Intervals concern peer means, not contrasts or individuals; earlier-period peers are not necessarily fairer or causally adjusted. This development rendering establishes implemented interaction, not improved accuracy or usability.

Peer comparison unavailable
0 observed focal weeks.
1,001 peers / 1,997 person-weeks.

Explicit recent-peer insufficiency. Personal insufficiency remains separate.

Selected peer answers: weeks 0–3. The recent-peer answer is omitted.

Figure S1: Correct source-bound numbers with an incomplete answer, saved development case s6_15. The question requests recent weeks 10–11 and separate personal and peer answers. (a) Compact A selected two peer comparisons for weeks 0–3 and a separate personal-insufficiency answer; its recent-peer answer remains omitted. (b) Enumeration explicitly selects recent-peer insufficiency as well as personal insufficiency. All numerical values and support results were computed by deterministic tools; the original compiler supplied wording/context. Presentation v2 preserves the selections and changes their layout. Editorial annotations outside the faithful browser excerpts identify the mismatch, using the existing audit rather than a new score. Full originals remain linked for scientific review. Peer intervals describe peer means; unavailable is not zero. This is neither a repaired agent result nor a usability evaluation.

(b) Assessment activity

Case D · saved development case

What do my assessment records show?

Earlier weeks 0-3
Recent weeks 8-11 · through day 83

Non-banked submissions

0.25 per observed week

Peer 0.07 · difference +0.18.

Peer mean 95% CI [0.05, 0.08].

Scheduled assessments without a recorded submission

0.00 per observed week

Peer 0.00 · difference 0.00.

Peer mean 95% CI [0.00, 0.00].

Dated assessment states

● Due 19 · as of day 20

Non-banked submission recorded

○ Due 54 · as of day 55

No non-banked submission by week end

4 observed focal weeks.

Presentation peers, weeks 8-11:

218 people / 867 person-weeks.

Marks and banking approval are unavailable. Dated states are snapshots; they do not measure learning or achievement. Intervals describe peer means only.

Saved agent output · new rendering

Qwen2.5-14B · compact A

Saved selections · deterministic values

Figure S2: Additional adaptive views of saved compact-A development outputs: (a) case s6_05, a named saved reference with aligned scale, scoped counts and an evidence link; (b) case s6_17, weekly submission measures and dated assessment states. The agent selected analytical content, tools calculated the displayed values and peer-mean intervals, and the original compiler supplied required structure and context. Presentation v2 adapts the layout and viewing controls. Dated states retain their earlier as-of days and do not rewrite later observations. A missing submission is not an achievement judgment; grade release and banking approval remain unknown. Reference viewing invokes neither an agent nor fresh analysis. No accuracy or usability gain is established by these renderings.
